

VentureMind — Product Requirements Document (PRD)

The AI Brain Behind Nomad Flow

Version 1.0 | May 2026

Who this document is for: Founders, investors, advisors, partners, and any person who wants to understand exactly what VentureMind is, what it does, why it matters, and how it works — without reading a single line of code.

1. WHAT IS VENTUREMIND?

1.1 The Short Version

VentureMind is an AI assistant that helps founders start and run their entire business internationally — from registering a company and opening a bank account, to paying less tax and finding investors.

Instead of hiring a lawyer, an accountant, a business consultant, and a tax advisor — VentureMind replaces all of them with one intelligent platform that works 24 hours a day, 7 days a week, never forgets anything, and never sleeps.

1.2 The Long Version

VentureMind is the “AI brain” powering a larger platform called **Nomad Flow**. Think of it like this:

- **Nomad Flow** is the product founders see and use — the website, the app, the dashboards.
- **VentureMind** is the intelligence inside Nomad Flow — the part that actually thinks, plans, researches, and coordinates.

Nomad Flow is what you see on the surface. VentureMind is what makes it smart.

VentureMind is built as a “**Swarm of Swarms**” — ten independent AI teams, each specialized in one specific area of running a global business. One swarm handles legal work. Another handles taxes. Another handles finding funding. Another handles travel and residency. And so on.

These swarms don’t work in isolation — they are coordinated by a central AI “executive” that makes sure everything works together, that nothing is missed, and that every decision is logged for audit purposes.

2. THE PROBLEM WE SOLVE

2.1 The Founder's Nightmare

When a founder decides to build a global business, they face a terrifying amount of complexity:

Task	Who They Need	Average Cost	Average Time
Register a company in another country	Business lawyer	\$2,000-\$10,000	2-8 weeks
Open a business bank account	Bank + lawyer	\$500-\$3,000	4-12 weeks
Set up tax strategy	Tax accountant	\$1,000-\$5,000	1-4 weeks
Apply for residency/visa	Immigration lawyer	\$2,000-\$15,000	3-6 months
Find investors	Business broker/advisor	\$10,000-\$50,000	3-12 months
Build a website/app	Development team	\$5,000-\$200,000	1-12 months
Set up crypto banking	Crypto financial advisor	\$1,000-\$5,000	2-8 weeks

The total cost to start a proper global business the traditional way: \$20,000-\$300,000+ before a single dollar of revenue.

And even after spending all that money, founders face: -

Fragmented advice: The lawyer doesn't talk to the accountant. The accountant doesn't know what the investor is planning.

Nothing is connected. - **Outdated information:** Laws change constantly. The advice from last year may be wrong today. - **Human error and forgetfulness:** Humans miss deadlines. They lose track of documents. They have conflicts of interest. - **No accountability:** When something goes wrong, the founder has no one to blame and no record of who said what.

2.2 The Market Opportunity

There are approximately **500 million entrepreneurs** globally who need international business infrastructure. The global market for business formation, tax advisory, and compliance services is worth over **\$800 billion per year**.

Every single one of these founders faces the same problems. No existing platform solves all of them simultaneously. They are all fragmented.

3. THE SOLUTION: SWARM OF SWARMS

3.1 What Does “Swarm of Swarms” Mean?

Imagine you have ten different expert assistants, each one specialized in one specific area of your business:

- One assistant knows everything about law.
- One assistant knows everything about taxes.
- One assistant knows everything about finding investors.
- One assistant knows everything about building software.
- And so on.

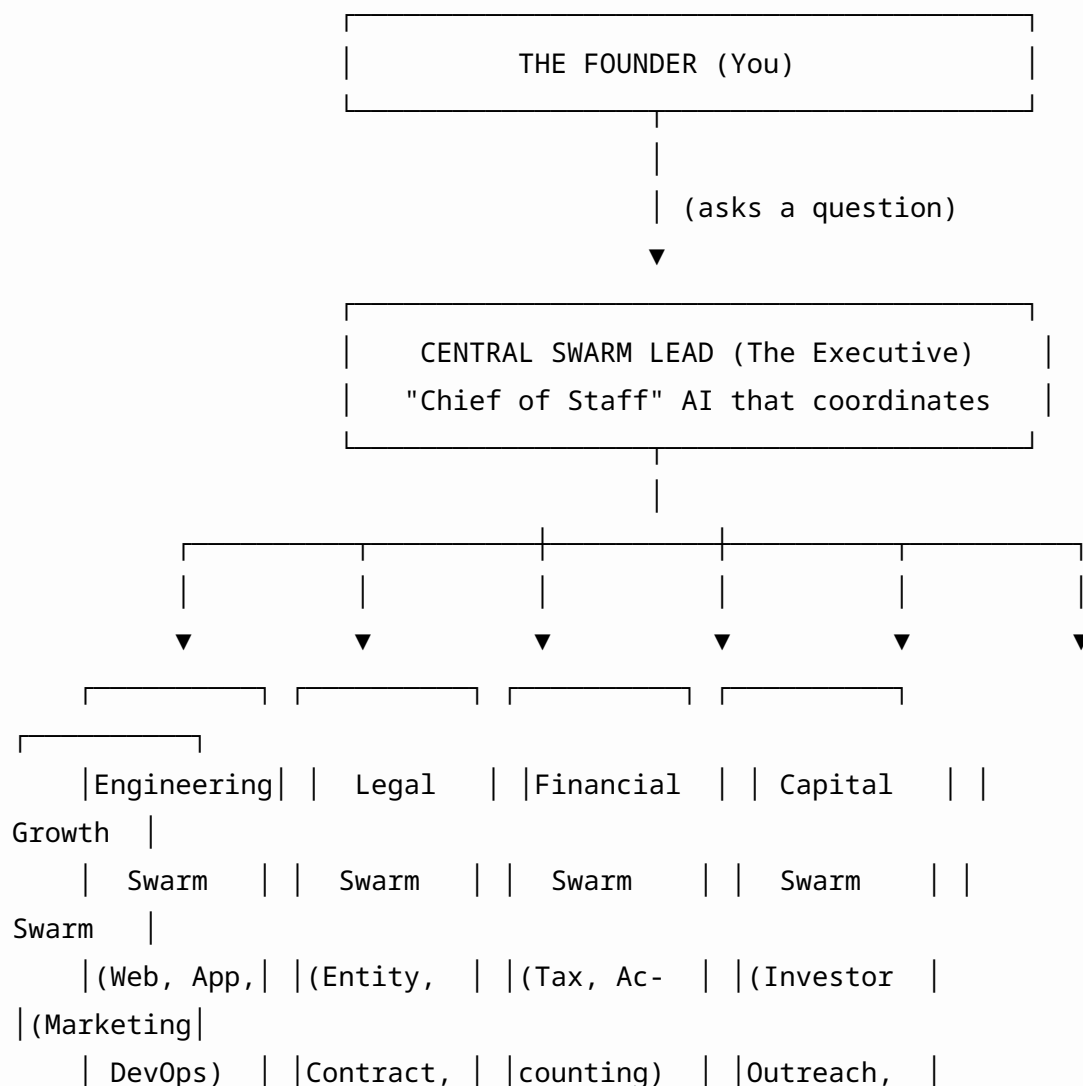

Now imagine those ten assistants are not humans — they are AI agents that can work 24/7, never forget anything, never make silly mistakes from tiredness, and can communicate with each other instantly.

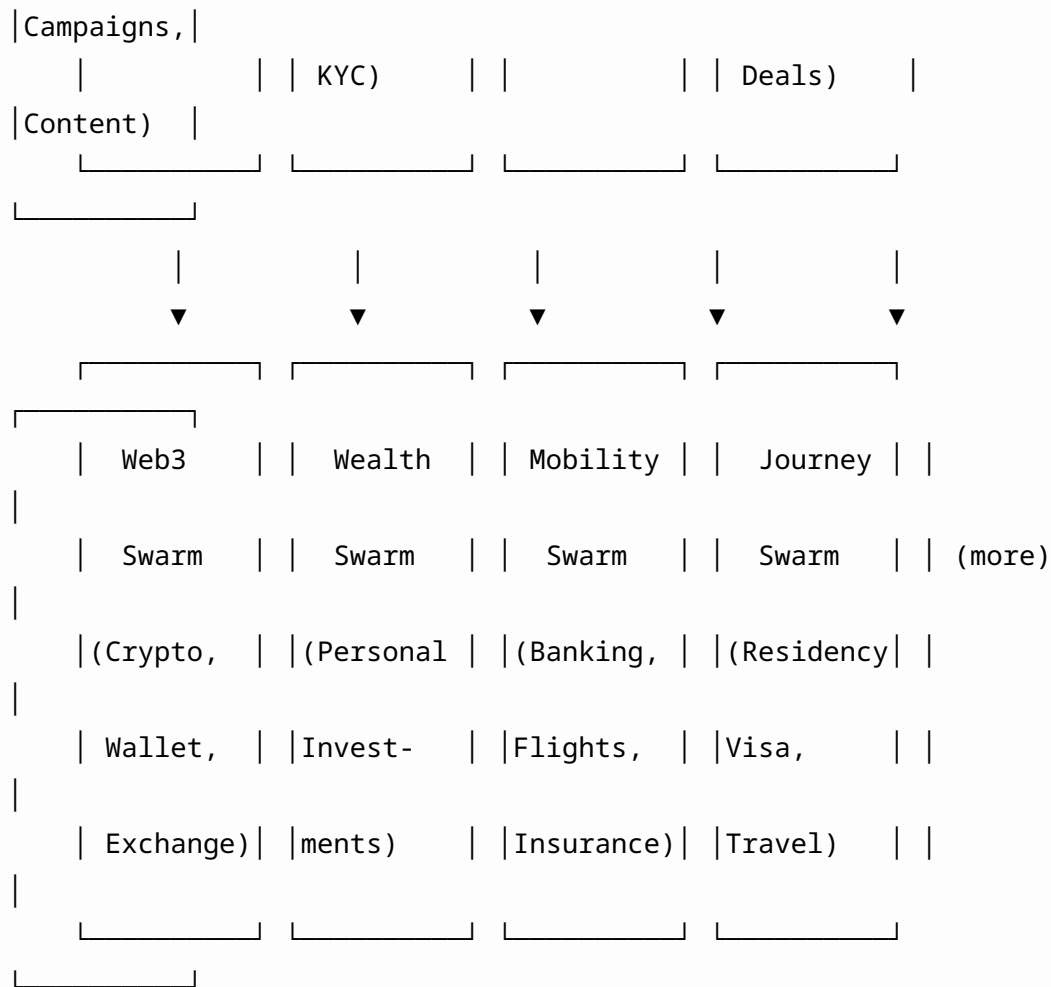

That is a “**Swarm**” — a team of AI agents working together.

Now imagine those ten swarms are themselves coordinated by an **11th AI** — a central executive that assigns tasks, tracks progress, makes sure nothing falls through the cracks, and escalates to a human when something is too risky or too important.

That is “**Swarm of Swarms**” — the architecture that powers VentureMind.

3.2 The Architecture Diagram

3.3 How the Swarms Talk to Each Other

Each swarm has its own memory and knowledge base. The Engineering Swarm does not try to do tax work. The Financial Swarm does not try to write code. They each stay in their lane.

When a swarm needs information from another domain, it sends a request through the **Central Swarm Lead** — just like a human executive assistant would coordinate between departments.

Every single decision made by any swarm is logged in an **Audit Log** — an immutable record of exactly what was decided, why, when, and what confidence the AI had in the decision.

4. THE 10 SWARMS: WHAT EACH ONE DOES

4.1 Engineering Swarm — “The Builder”

What it does: Builds your website, app, and software infrastructure.

Sub-agents: - **Architect Agent:** Designs the technical blueprint — which technologies to use, how the system should be structured. - **DevOps Agent:** Manages the infrastructure — servers, cloud services, deployment pipelines, security updates. - **Full-Stack Agent:** Writes the actual code — frontend (what users see) and backend (how it works behind the scenes).

Example tasks: - “Build me a landing page for my new consulting business.” - “Set up an email automation system for my newsletter.” - “Create a dashboard where my clients can see their tax status.”

4.2 Legal Swarm — “The Protector”

What it does: Handles everything related to law, contracts, and compliance.

Sub-agents: - **Entity Formation Agent:** Decides which legal structure is best (LLC, Corporation, IBC, etc.) and handles registration. - **Contract Drafting Agent:** Writes and reviews contracts — client agreements, partnership agreements, employment contracts. - **KYC (Know Your Customer) Agent:** Verifies identities, runs compliance checks, manages anti-money-laundering requirements. - **Compliance Auditor Agent:** Continuously monitors that the business stays compliant with regulations across all relevant jurisdictions.

Example tasks: - “Should I register my company in Wyoming, Delaware, or the UAE?” - “I need a contract for a client in Europe — what clauses do I need?” - “My business is now in three countries — what compliance do I need in each?”

4.3 Financial Swarm — “The Accountant”

What it does: Manages taxes, bookkeeping, and financial planning.

Sub-agents: - **Tax Strategist Agent:** Identifies legal ways to reduce your tax burden across jurisdictions. - **Bookkeeping Agent:** Tracks income, expenses, invoices, and financial records. - **Tax Filing Agent:** Prepares and submits tax returns for multiple jurisdictions. - **IRS/Authority Defense Agent:** If you are audited or face a tax dispute, this agent coordinates the response.

Example tasks: - “I made \$200,000 this year. What’s the best way to legally pay the least tax?” - “I have income from the US, UK, and Nigeria. How do I file in all three?” - “My accountant sent me this document — can you explain what it means?”

4.4 Capital Swarm — “The Investor”

What it does: Helps raise money and manage investor relationships.

Sub-agents: - **Investor Research Agent:** Identifies potential investors who fit your business type, stage, and industry. - **Pitch Preparation Agent:** Helps craft the perfect pitch deck and investor presentation. - **Due Diligence Agent:** Prepares the financial and legal due diligence materials investors expect. - **Investor Relations Agent:** Manages ongoing communication with investors post-funding.

Example tasks: - “Who should I pitch to if I’m raising \$500,000 for my fintech startup?” - “Help me create a pitch deck for angel investors.” - “What due diligence documents will investors need from me?”

4.5 Growth Swarm — “The Voice”

What it does: Handles marketing, content, and brand building.

Sub-agents: - **Content Strategist Agent:** Plans what content to create and when. - **SEO Agent:** Optimizes your website and content to rank on Google. - **Social Media Agent:** Manages your presence on LinkedIn, Twitter, Instagram, etc. - **Campaign Agent:** Designs and runs paid advertising campaigns.

Example tasks: - “What should I post on LinkedIn to attract fintech investors?” - “How do I get my website to rank #1 on Google for ‘crypto-friendly business bank’?” - “Create a 90-day content calendar for my consulting business.”

4.6 Web3 Swarm — “The Decentralist”

What it does: Handles everything related to cryptocurrency, blockchain, and decentralized finance.

Sub-agents: - **Custody Agent:** Manages exchange setup and secure wallet infrastructure. - **DeFi Agent:** Identifies opportunities in decentralized finance (lending, staking, liquidity pools). - **Tokenomics Agent:** If you are building a token or crypto project, this agent designs the economic model. - **NFT/DAO Agent:** Manages NFT collections or DAO governance structures.

Example tasks: - “I want to accept Bitcoin as payment for my consulting business. How do I set that up?” - “Should I store my company treasury in a multi-sig wallet? Which one?” - “What are the tax implications of holding Ethereum as a business asset in the UAE?”

4.7 Wealth Swarm — “The Wealth Architect”

What it does: Manages personal and business investments and financial growth.

Sub-agents: - **Portfolio Planner Agent:** Creates long-term investment strategies based on your risk profile. - **Asset Allocation Agent:** Decides how to divide investments across stocks, bonds, real estate, crypto, etc. - **Legacy Planning Agent:** Manages estate planning, trusts, and inheritance structures. - **Risk Assessment Agent:** Continuously monitors your financial exposure and suggests hedging strategies.

Example tasks: - “I have \$100,000 to invest. What’s the best strategy for a US-based founder living in Dubai?” - “Should I buy real estate in Portugal or the UAE for my second residency?” - “How do I protect my wealth if I’m traveling to high-risk countries?”

4.8 Mobility Swarm — “The Concierge”

What it does: Handles everything about physical movement — travel, logistics, and lifestyle infrastructure.

Sub-agents: - **Banking Access Agent:** Identifies and applies for the best business bank accounts globally. - **Flight Agent:** Finds the best flight deals, books travel, manages loyalty programs. - **Insurance Agent:** Identifies optimal health, travel, and business insurance globally. - **Lifestyle Agent:** Finds apartments, co-working spaces, restaurants, and services in any city.

Example tasks: - “What’s the best business bank account for a US entrepreneur living abroad?” - “I need to fly from Shanghai to New York next week — find me the best option.” - “I just moved to Lisbon. Where should I work from and what gyms are nearby?”

4.9 Journey Swarm — “The Path Builder”

What it does: Manages residency, visa, immigration, and citizenship-by-investment programs.

Sub-agents: - **Visa Navigator Agent:** Identifies the best visa pathways for your specific situation. - **Residency Agent:** Manages the application process for residency permits. - **Citizenship Agent:** If you are pursuing a second citizenship through investment, this agent coordinates the full process. - **Immigration Defense Agent:** Handles disputes, rejections, or appeals with immigration authorities.

Example tasks: - “I’m a Zimbabwean national. What’s the fastest way to get a European residency permit?” - “I want to spend 6 months in the UAE and 6 months in Portugal. What visa do I need for each?” - “Is the UAE golden visa worth it for a tech founder? What are the requirements?”

4.10 Central Swarm — “The Executive”

What it does: The boss of all swarms. Coordinates everything.

Sub-agents: - **Strategy Agent:** Takes your raw idea and turns it into a structured, prioritized plan of action. - **Operator Agent:** Routes questions and tasks to the right swarm and tracks progress across all domains. - **Talent Agent:** Monitors the quality of outputs across all swarms and flags issues.

This swarm does not do legal, tax, or marketing work itself — it makes sure the other swarms do their jobs correctly and in the right order.

5. THE JOURNEY: HOW A FOUNDER USES VENTUREMIND

5.1 The Structured Discovery Phase (Week 1)

When you first sign up, VentureMind doesn't just ask "How can I help you?" It guides you through a structured intake process.

Step 1: The Strategist Interview

VentureMind asks you a series of questions to understand exactly who you are, what you want, and what your situation looks like. This is called the **Strategist Agent** — an AI that asks smart, branching questions.

Sample questions include: - "What is your nationality?" - "Where do you currently live and pay tax?" - "What type of business do you want to run?" - "How much revenue do you expect in year one?" - "Have you already registered a company anywhere in the world?" - "What is your risk tolerance for tax optimization?" - "Do you need residency in a specific country?"

This is not a simple form. It adapts based on your answers — if you say "I want to start a fintech company," it asks follow-up questions about financial licenses. If you say "I want to live in the UAE," it asks about your current visa status.

Step 2: Document Collection

VentureMind asks you to upload relevant documents: - Passport - Proof of address - Existing company registration documents - Tax records - Any existing contracts

All documents are encrypted immediately and stored using **Zero-Knowledge Encryption** — which means no one at VentureMind, no hacker, and no government can read your documents without your explicit permission. (See Section 7 for full details.)

Step 3: Competitive Research

Once VentureMind understands your business, it runs parallel research across: - Your direct competitors - Legal requirements in your target jurisdictions - Tax treaty networks relevant to your structure - Market sizing and opportunity analysis

Step 4: The Founder Profile

All of this information is compiled into your **Founder Profile** — a comprehensive, living document that VentureMind references for every future decision. It includes: - Your goals and risk tolerance - Your current legal and financial situation - Your target jurisdictions - Your timeline and milestones - A confidence score for your overall plan (anything below 70% triggers a human review)

5.2 The Research Phase (Week 2)

With the Founder Profile in hand, VentureMind's research agents go to work:

Simultaneously, the platform runs four parallel research tracks:

1. **Legal Intelligence:** What are the exact legal requirements for your business in each target country?
2. **Tax Intelligence:** What tax treaties apply? Where can you legally reduce your burden?
3. **Market Intelligence:** Who are your competitors? What is the market size?
4. **Operational Intelligence:** What bank accounts, payment processors, and service providers do you need?

Everything is verified against primary sources (government websites, official treaties, published regulations). If any claim cannot be verified, it is flagged with a warning.

5.3 The Planning Phase (Week 3)

VentureMind synthesizes all research into a **Founder Roadmap** — a structured plan that answers:

- Which company to register, where, and why
- Which bank accounts to open, and in what order
- Which tax structure to use
- Which visa or residency pathway to pursue
- What the monthly operating cost will be
- What the expected year-one revenue should be
- What the top 3 risks are and how they are mitigated

This roadmap is written in plain language — no jargon, no legalese, no technical complexity.

5.4 The Execution Phase — “The Green Button” (Week 4 onwards)

This is where VentureMind moves from “**advice**” to “**execution.**”

Once you approve your Founder Roadmap, you can authorize specific actions with your **Green Button** — a secure, cryptographically signed command that tells VentureMind to go execute a task on your behalf.

How the Green Button Works

Green Button commands look like this:

```
EXECUTE: FORMATION(Wyoming_LLC) → BANKING(Mercury) →  
WALLET(Safe_MultiSig) → FUNDING(Stripe_Connect)
```

Each command has a **risk level**:

Risk Level	Color	What It Means
Green	Green	Low risk. AI executes automatically. Example: "Send my pitch deck to 10 investors."
Orange	Orange	Medium risk. AI prepares everything and asks for your explicit approval before executing.
Red	Red	High risk. AI prepares everything, your designated human advisor must also approve, and there is a 24-hour cooling-off period before execution.
CRIMSON	Crimson	Maximum risk. Multi-signature required, 48-hour cooling period, and a human lawyer must countersign.

Examples of Green Button executions:

Command	Risk Level	What Happens
"Register a Wyoming LLC"	Orange	VentureMind prepares the filing, shows you the exact documents, asks you to confirm, then submits.
"Open a Mercury bank account"	Red	VentureMind prepares the application, your human advisor is notified to review, 24-hour hold, then submitted.
"Wire \$50,000 to a new partner"	CRIMSON	Multi-sig required, your lawyer is notified, 48-

Command	Risk Level	What Happens
		hour hold, then executed.

The Human-in-the-Loop (HITL) System

For anything involving real money or legal risk, VentureMind has a **SafetyNet** — a system that never lets an AI make irreversible decisions without human authorization.

This protects you from: - AI hallucinations (when an AI confidently says something wrong) - Prompt injection attacks (when a malicious input tries to manipulate the AI) - Single points of failure - Regulatory violations

5.5 Ongoing Operations (Month 2+)

Once your business is running, VentureMind continues to operate in the background:

- **Monthly Briefings:** Every month, you receive a structured briefing from the Central Swarm — what's due, what's changed, what needs attention.
- **Proactive Alerts:** If a law changes in one of your jurisdictions, VentureMind alerts you within 24 hours with an explanation and recommended action.
- **Quarterly Review:** Every quarter, your full Founder Profile is reviewed and updated based on your actual results vs. projected results.
- **Continuous Optimization:** VentureMind continuously looks for opportunities to reduce your tax burden, improve your banking, and strengthen your legal structure.

6. SAFETY, TRUST, AND LEGAL PROTECTION

6.1 Why You Can Trust VentureMind's Advice

Source Verification

Every piece of legal or tax advice generated by VentureMind is linked to a primary source: - Government websites (.gov, .gov.uk, etc.) - Official treaty documents (OECD, UN, etc.) - Published court rulings - Licensed legal databases

If a claim cannot be verified against a primary source, it is clearly labeled as **“unverified — use with caution”** and does not count toward the plan's confidence score.

Confidence Scores

Every recommendation comes with a **confidence score** from 0 to 1:

- **0.90-1.00**: High confidence. This is well-established law. Proceed.
- **0.70-0.89**: Medium confidence. This is the most likely interpretation, but there is some uncertainty. Your human advisor should review.
- **0.50-0.69**: Low confidence. This is speculative. Human review is mandatory.
- **Below 0.50**: VentureMind will not make this recommendation. It will flag it as “Insufficient Information” and escalate to a human expert.

The Audit Log

Every single decision, question, and recommendation is logged in an **immutable audit trail**. This means:

- If something goes wrong, we can trace exactly what was recommended, when, and why.
- You have a complete record of every decision made on your behalf.
- Regulators can be provided with a complete history if needed.
- You can never be told “we recommended something different” — the log is the truth.

6.2 Non-Negotiable Legal Clauses

Before VentureMind provides any advice, every user must agree to two legal terms:

1. **Limitation of Liability:** VentureMind provides guidance, not licensed legal or tax advice. A licensed human attorney or CPA should review all significant decisions. VentureMind is a tool, not a lawyer.
2. **AI Disclaimer:** AI systems can make errors. All AI-generated advice should be verified by a qualified human before acting on it.

These are non-negotiable. They appear prominently at signup and are re-displayed every time a CRIMSON-level action is authorized.

6.3 Insurance and Bonding

VentureMind maintains: - **Professional Liability Insurance** (E&O) covering advice errors - **Cyber Liability Insurance** covering data breaches - **Fiduciary Bond** covering mismanagement of client funds (for the Green Button execution layer)

7. HOW WE KEEP YOUR DATA SAFE

7.1 The Zero-Knowledge Architecture

Your data is protected using **Zero-Knowledge Encryption** — the same technology used by the US military and the world's most secure financial institutions.

Here is what this means in plain English:

Traditional system: You send your passport to a server. The server decrypts it, stores it, and later someone with access reads it.

Zero-Knowledge system: You encrypt your passport on your own device before sending it. The server receives it but **cannot decrypt it** — it is mathematically impossible without your key. When you need the document again, only you can decrypt it.

Your encryption key is called the **Ghost Key**. It never leaves your device. It is not stored on our servers. It is not in our database. It does not exist anywhere except on your device.

7.2 The Ghost Protocol

The Ghost Protocol ensures that:

1. **Client-Side Encryption:** All sensitive documents are encrypted in your browser before they are transmitted.
2. **Isolated Storage:** Encrypted documents are stored in isolated, access-controlled storage with zero VentureMind employee access.
3. **End-to-End Encryption:** Any document shared with a human advisor (lawyer, accountant) is decrypted only on their device — not on our servers.
4. **No Training Data Use:** Your documents, your questions, and your business data are **never used to train any AI model**.

7.3 The Watchdog Agent

Independent of all other swarms, the **Watchdog Agent** is a security-focused AI that: - Monitors all system access logs 24/7 - Alerts on unusual patterns (bulk downloads, unusual access times, etc.) - Triggers automatic account lockdown if a breach pattern is detected - Runs weekly penetration testing simulations - Produces a monthly **VentureMind Security Report** sent directly to you

7.4 TEE (Trusted Execution Environment)

For the highest-security operations (Green Button execution, multi-sig authorization), VentureMind uses **Trusted Execution Environments** — special hardware that creates a mathematically isolated execution environment. Even if a hacker gains root access to our servers, they cannot read or modify data inside the TEE.

8. BUSINESS MODEL: HOW WE MAKE MONEY

8.1 Subscription Tiers

VentureMind operates on a tiered subscription model:

Tier	Name	Price	Best For
Tier 1	Explorer	\$99/month	Founders just starting out. Access to 3 swarms, basic legal entity research, and community access.
Tier 2	Builder	\$299/month	Founders with live businesses. Full swarm access, Green

Tier	Name	Price	Best For
			Button execution, up to 5 jurisdictions.
Tier 3	Sovereign	\$999/month	High-growth founders. Unlimited jurisdictions, priority processing, dedicated human advisor on-call, CRIMSON-level execution.
Tier 4	Enterprise	Custom	Multi-entity groups. White-label options, API access, dedicated account manager.

8.2 Revenue Share

When VentureMind successfully facilitates a funding round, investment, or acquisition for a founder: - VentureMind takes a **2-5% success fee** on the deal value - This is only charged if the deal closes - Tier 1 founders are exempt from success fees on their first deal

8.3 Affiliate Revenue

VentureMind earns referral fees from trusted service providers (banks, incorporation agents, insurance providers). These fees are: - Disclosed to you in every recommendation - Never influence the quality or objectivity of advice - Typically 0.5-2% of the transaction value

9. ROADMAP: HOW WE BUILD THIS

Phase 1: Core Intelligence (Months 1-3)

- Deploy Central Swarm Lead + Engineering Swarm
- Build Structured Discovery intake system
- Integrate Paperclip orchestration layer
- Launch Tier 1 Explorer product to beta users

Phase 2: Full Swarm Deployment (Months 4-6)

- Deploy all 10 domain swarms
- Launch Green Button execution layer
- Integrate KYC/AML compliance system
- Launch Tier 2 Builder product

Phase 3: Autonomous Execution (Months 7-12)

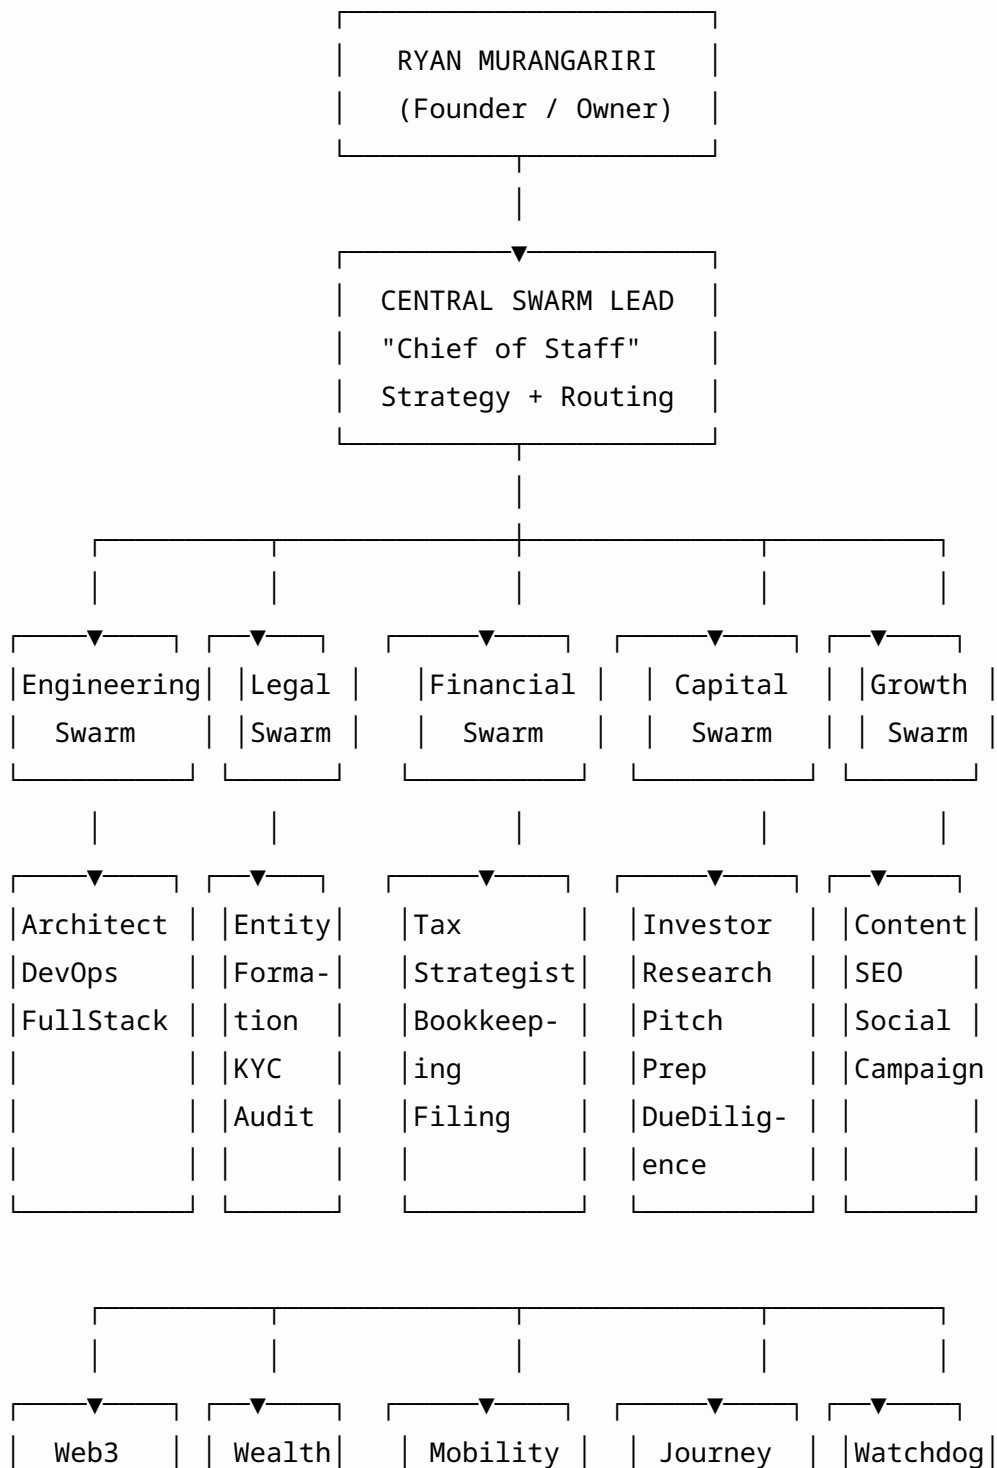

- Enable real bank account applications via API
- Enable real company registration filings via API
- Launch Tier 3 Sovereign product
- Begin AI-to-AI deal flow with partner platforms

Phase 4: Global Scale (Year 2)

- Expand to 50+ jurisdictions
 - Launch mobile app (iOS and Android)
 - Launch white-label product for accelerators and VCs
 - Target 10,000 active founders on platform
-

10. THE TEAM STRUCTURE (THE SWARMS)

Organizational Chart

11. GLOSSARY

Term	Definition
Agent	A specialized AI that performs a specific task. Like a digital employee.
AML	Anti-Money Laundering — regulations to prevent criminals from using businesses to hide illegal money.
Audit Log	An immutable record of every decision made by the AI, including when, why, and with what confidence.
COMPANY.md	The master configuration file that defines the entire VentureMind company structure for the Paperclip orchestration system.
Confidence Score	A number between 0 and 1 that tells you how sure the AI is about a recommendation.
CRIMSON Level	The highest risk level. Requires multi-signature, lawyer approval, and 48-hour cooling.
Discovery Phase	The structured intake process where VentureMind learns everything about you before making any recommendations.
Domain Lead	The senior AI agent in each swarm who manages the sub-agents and reports to the Central Swarm.
EDD	Enhanced Due Diligence — extra scrutiny applied to high-risk users or transactions.
Feynman	

Term	Definition
	The research intelligence layer — an AI that verifies facts, finds sources, and checks for errors.
Founder Profile	A comprehensive living document that captures everything VentureMind knows about you and your goals.
Ghost Key	Your personal encryption key. It never leaves your device and is mathematically impossible to recover from our servers.
Ghost Protocol	The data security system that ensures your documents are encrypted and inaccessible to everyone except you.
Green Button	The secure command interface that lets you authorize AI actions with different risk levels.
gstack	A set of 23 engineering tools that give an AI the equivalent skills of a full engineering team.
HITL	Human-in-the-Loop — the system that ensures a human approves certain actions before the AI executes them.
IBC	International Business Company — a type of offshore company with special tax and privacy benefits.
KYC	Know Your Customer — the process of verifying who you are before providing services.
LLC	Limited Liability Company — a US business structure that protects personal assets from business debts.
Nomad Flow	The consumer-facing platform that founders interact with. VentureMind is the AI brain inside Nomad Flow.
Orchestrator	The central AI that coordinates all swarms, manages state, and routes tasks.

Term	Definition
Paperclip	The platform that runs VentureMind as an autonomous company with org charts, budgets, and audit logs.
SafetyNet	The overall safety framework that includes HITL triggers, Watchdog monitoring, and escalation protocols.
SAR	Suspicious Activity Report — a mandatory report filed when a transaction looks like it might be money laundering.
Skill	A defined capability that can be attached to any agent. Like giving an agent a specialized tool.
Swarm	A team of specialized AI agents working together under a Domain Lead.
Swarm of Swarms	The full VentureMind architecture — 10 domain swarms coordinated by a central executive swarm.
TEE	Trusted Execution Environment — special secure hardware that isolates sensitive computations.
Zero-Knowledge Encryption	A type of encryption where the server can store data without ever being able to read it.
agent-skills-eval	A testing framework that validates whether each AI skill actually works as intended.
